SERVICE INFORMATION

GENERAL INSTRUCTIONS

- The water pump must be serviced after removing the engine.
Other cooling system service can be done with the engine installed in the frame.
- The engine must be cool before servicing the cooling system.
When the coolant temperature is over 100°C, never remove the radiator cap to release the pressure because the boiling coolant may cause danger.
- Avoid spilling coolant on painted surfaces because the coolant will corrode the painted surfaces.
Wash off any spilled coolant with fresh water as soon as possible.
- After servicing the system, check for leaks with a cooling system tester.

COOLING SYSTEM TESTING

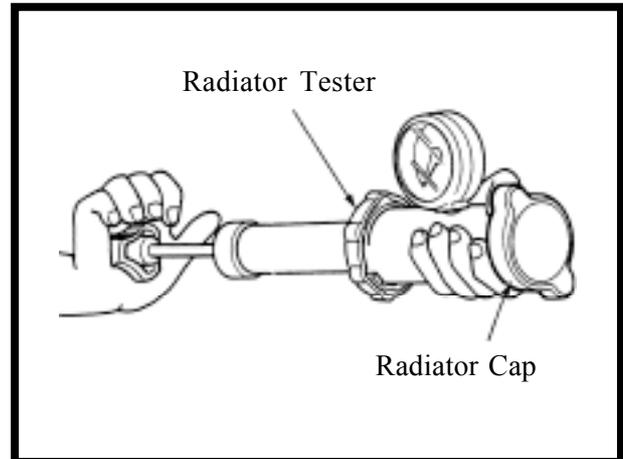

RADIATOR CAP INSPECTION

Install the radiator cap onto the radiator tester and apply specified pressure to it. It must hold specified pressure for at least six seconds.

- Apply water to the cap sealing surface before testing.

Radiator Cap Relief Pressure:

0.75~1.05kg/cm₂

Install the radiator tester onto the radiator and apply specified pressure to it. It must hold specified pressure for at least six seconds.

Check the water hoses and connectors for leaks.

- The test pressure should not exceed 1.05 kg/cm₂. Excessive pressure can damage the radiator and its hose connectors.

12. COOLING SYSTEM

RADIATOR
